

LifeNet Quarterly Report: Quarter 4

Partners

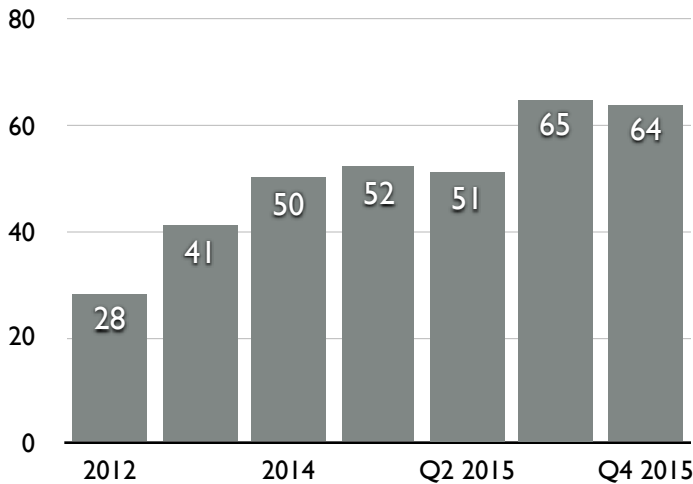

This quarter, LN conducted baseline assessments at 15 health centers in the DRC, preparing to launch its pilot program with 10 facilities in 2016.

Active Health Center Partnerships by Country

Number of Active Partner Health Centers

Note: In Q4, one health center partner in Burundi shut down due to the ongoing political conflict.

LifeNet partner health centers received 240,000* patients visits last quarter

* Note: This data is taken from July to September and includes estimates for some data from partners who have not yet reported.

Trainings and Programs

Trainings

Medical

Module 1: 16 clinics
Module 2: 12 clinics
Module 3: 36 clinics

Management

Unit 1: 18 clinics
Unit 2: 23 clinics
Unit 3: 23 clinics

403 staff received medical trainings this quarter

(1 person = 10 staff)

537 Hours of training were conducted this quarter

(1 clock = 10 hours)

44 deliveries were made at 23 health facilities this quarter

The deliveries were worth \$23,002.00

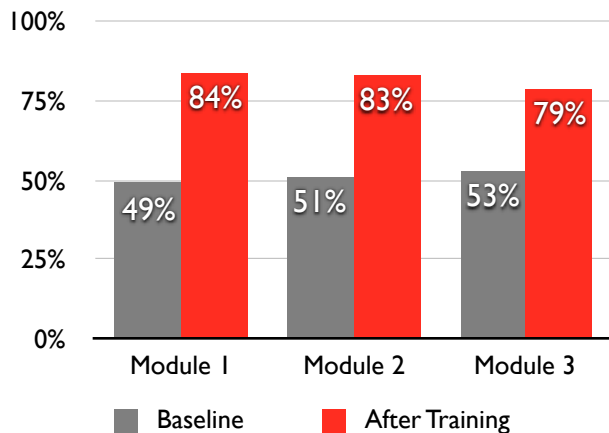

Equipment loans have been made for:
39 Dental kits
6 Microscopes
5 Delivery Beds
3 Hospital Beds

The equipment generated \$5,643 in revenue for partner clinics this quarter.

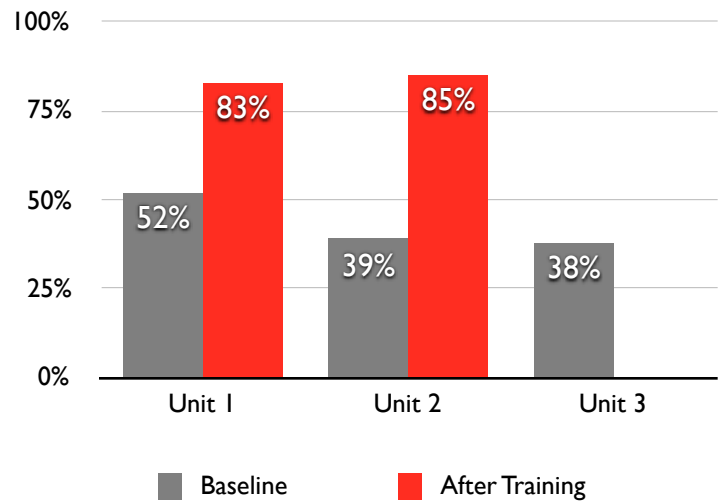

Impact - Burundi

Quality Score Cards: LN measures impact through its Quality Score Cards (QSCs). Both the medical and management QSC consists of over 100 measurements that indicate the quality of health practices and whether partner facilities are adhering to LN's franchise quality standards. QSCs are broken down by module and pre- and post tests to show improvement over time and different subjects. In the Uganda and DRC baseline score graphs, existing quality is extremely low. LN is eager to partner with these health centers to equip them with the training they need to make life-saving improvements to the care they provide their communities.

Success Story: At one Burundi health center, nurses stored all medicines in one disorganized drawer. When LN returned the month after providing training on pharmacy stock maintenance, the facility had purchased a medication storage unit where they had their full stock of medicines stored, labeled, and organized.
