Equipment loans have been made for:
40 Dental kits
6 Microscopes
6 Delivery Beds
3 Hospital Beds

The equipment generated \$670 in revenue for partner clinics this quarter.

Impact - Burundi

Quality Score Cards : LN measures impact through its Quality Score Cards (QSCs). Both the medical and management QSC consists of over 100 measurements that indicate the quality of health practices and whether partner facilities are adhering to LN's franchise quality standards. QSCs are broken down by module and pre- and post tests to show improvement over time and different subjects. In the Uganda and DRC baseline score graphs, existing quality is extremely low. LN is eager to partner with these health centers to equip them with the training they need to make life-saving improvements to the care they provide their communities.

Burundi Improvement in Medical Scores After Training

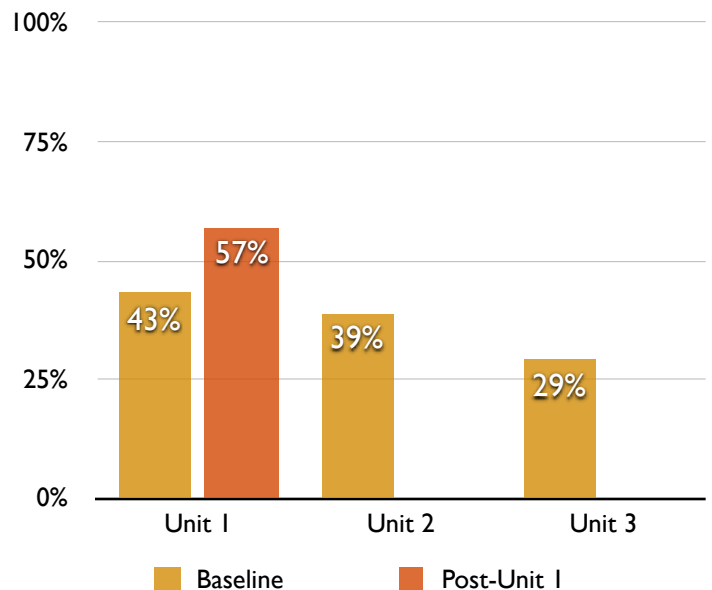

Burundi Improvement in Management Scores After Training

Medical Scores in Uganda

Management Scores in Uganda

Note: Baseline scores only include facilities that have completed Unit 1 and Module 1 tests because of the small sample size for direct comparison

“There is visible improvement in health service delivery and staff are now more interested in quality improvement.” – Manager at a LN Uganda Partner Health Facility
